

K-MULTID

Multi-function locker double sided

Ideal for kid's ski storage, the K-MULTI locker has evolved over time to accommodate all types of equipment. The independent positioning of each cross-bar support, the wide choice of racks and shelves, and the versatility of the modular setting, make this solution a guaranteed, effective, long-term investment.

GENERAL FEATURES

+ Independent cross-bar support positioning

The K-MULTI has many independent cross-bars supports on each side. This technical advantage enables the positioning of the levels of the cross-bar supports to easily change on both sides of the device according to the type of the equipment to store.

+ Installation of the forks and the micrometric adjustment

The cross-bar supports can be placed without the forks, which can be positioned as one wants.

+ Forks / Storing shelves / Drying shelves

The K-MULTID enables to make as many storing and drying layouts and combinations as you want of all type of equipment (skis, snowboards, snowshoes, poles, hulls, stored or dried ski boots).

+ High storage capacity

The device enables a better optimization of the used space (height/ surface area) : up to 216 pairs of kids' skis, up to 128 pairs of juniors' skis, up to 120 pairs of snowshoes, up to 900 pairs of poles and up to 108 snowboards.

RECOMMENDATION

+ For a proper functioning of the model with support rollers, the ground must be flat and horizontal (plan to level if necessary).
